- Measles in GuineaMarch 10, 2017A measles outbreak has been reported in Guinea, with 13 of the country's 33 prefectures affected. CDC recommends that travelers to Guinea protect themselves by making sure they are vaccinated against measles, particularly infants 6–11 months of age (1 dose of measles vaccine) and children 12 months of age or older (2 doses of measles vaccine). Clinicians should keep measles in mind when treating patients with fever and rash, especially if the patient has recently traveled internationally.[Read More >>](#)
- Avian Flu (H7N9) in ChinaMarch 07, 2017Chinese health authorities have confirmed human cases of avian influenza A (H7N9) since September 2016. CDC advises people traveling to China to avoid contact with poultry (including poultry markets and farms), birds, and their droppings and to avoid eating undercooked poultry. Infected birds that appear healthy may still be able to transmit this virus to humans.[Read More >>](#)
- Measles in RomaniaNovember 10, 2016A measles outbreak has been reported in Romania. CDC recommends that travelers to Romania protect themselves by making sure they are vaccinated against measles, particularly infants 6–11 months of age (1 dose of measles vaccine) and children 12 months of age or older (2 doses of measles vaccine). Clinicians should keep measles in mind when treating patients with fever and rash, especially if the patient has recently traveled internationally.
